

I CHOICE[®] Building Products By **SILPRO**

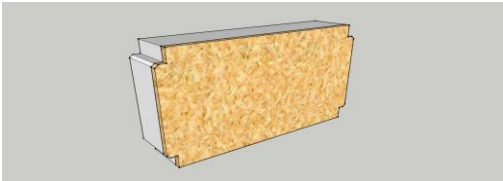

Rim Board

Features

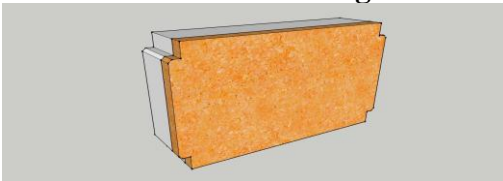

1. Modular receptacles for accurate I-joint placement
2. Maintains vertical alignment
3. Increase safety by reducing I-joint rollover
4. Web Support Reduces deflection
5. Less installation time reducing labor costs

Rim Insulation

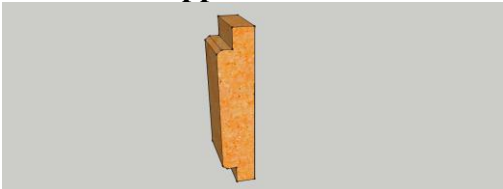

1. Aids in modular placement of I-joists
2. Installs in tandem with I-joists
3. Simplified installation of perimeter insulation
4. Resists moisture problems in perimeter insulation
5. Better fit than conventional insulation

Insulated Blocking

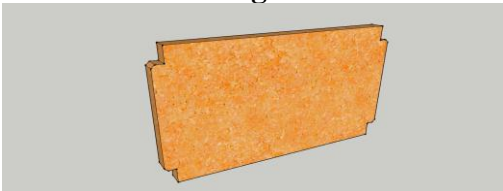

1. Resists I-joint rollover
2. Allows for modular spacing of I-joists
3. Resists moisture problems in perimeter insulation
4. Provides additional vertical load capacity
5. Easy solution for 19.2" OC I-joint spacing

Support Block

1. Increase point load bearing capacity
2. Maintains I-joint flange integrity...web nailing
3. Provides connectivity for fascia & cantilevered rim
4. Combination web stiffener and squash block
5. Protects I-joint under crushing vertical loads

Blocking Panel

1. Provides structural blocking for floors and roofs
2. Web nailing preserves I-joint flange integrity
3. Resist I-joint rollover during and after installation
4. Use multiple panels to increase load capacity
5. Use as end blocking perpendicular to I-joists
